UPCOMING SITE ACTIVITIES

Spring site maintenance activities, including those associated with promoting the establishment of vegetation at the Marjol Battery Site will soon begin. There will likely be a few small pieces of equipment (i.e., tractors for seeding and mowing) brought onto the Site in the next few weeks to be used for these activities. Working hours will be consistent with Throop Borough Ordinances (Monday through Friday from approximately 7 am to 5 pm and possibly on Saturdays as well).

Weekly erosion inspections as well as monthly inspections continue to take place. To view the monthly inspection reports, please go to the "Post-Construction Maintenance and Monitoring" page on our web site at www.marjolicleanup.com.

Other than maintenance and turf establishment activities, no other construction work at the Site is anticipated until possibly late Summer or Fall of this year (2011), when conversion of the sedimentation basin to a stormwater management basin may take place. Basin conversion cannot occur until vegetation is established at the Site.

The Community Relations Office will remain open through basin conversion activities, but there may not always be someone at the office. Lisa Ayers, Gould's Community Relations representative, is available however by telephone at any time. If you have any questions please contact Lisa Ayers at (570)383-9313 or (570)249-0918 or e-mail to layers@advancedgeoservices.com.

If you would like to sign up for our community newsletter or would like to sign up for email notifications when the Marjol web site is updated, please contact Lisa Ayers at (570)383-9313 or go to our web site:
